

Sustainable Eel Group (SEG) Standard Assessment

Palingkwekerij Koolen B.V.

Assessment against:

- Component 1: Core requirements.
- Component 4: Eel buying and trading.
- Component 5: Eel farming.

	Report date: 28 December 2021	On-Site Visit: 4 November 2021	Completed by: Andres Fellenberg van der Molen	
•	Certification Body 6 January 2022	Mr. David Bunt Sustainable Eel Group	Reviewed and approved by:	
			Reviewed and approved by:	

FINAL REPORT

Scope

This document represents the report completed following the 2021 audit carried out under the Sustainable Eel Group (SEG) Standard (Version 6.0a, Dec 2019) for Koolen B.V. This assessment has been conducted against Components 1, 4 & 5 of the standard.

The assessment is of a farming and trade of Eel located at Hongarijesedijk 12, 5571XC, Bergeijk, The Netherlands

1. Introduction

Bergeijk is a town and municipality in the Dutch province of North Brabant. The municipality has 18,800 inhabitants and a surface area of 103.22 km² (of which 0.70 km² water and over a quarter forest and nature area). The municipality of Bergeijk is part of the framework area SRE. The municipality of Bergeijk was created in 1997 by the redivision of the municipalities Bergeyk, Luyksgestel, Riethoven and Westerhoven. The municipality is characterised by beautiful nature. In 2007, a nature plan was implemented. In 2013 the municipality of Bergeijk was elected as "one of the greenest villages of Europe".

The current farm, which was rebuilt in 2012, is the largest eel farm in the Netherlands and is part of the Nijvis Group. Nijvis consists of other facilities for purchasing, storing, cultivation, and processing eels and eel products in France, Morocco, the Netherlands, and Germany.

The Koolen B.V. farm consists of a number of control and cultivation systems for the different growth stages of eels. The three sections of the farm consist of circular tanks of various sizes fed by separate water systems, separating incoming batches of glass eels and fingerlings when necessary.

The farm has 144 tanks and can produce up to 600 tonnes per year. In addition to the 144 tanks, another 14 are used to prepare and store the eels before being transported to the customers. The majority of the Eel's time from arrival to sale is two years.

The farm is designed in an environmentally responsible manner, including energy-efficient heat exchange systems, oxygen production systems and minimal effluent discharge.

4. Auditor conclusions

- **Component 1 General Requirements:** Palingkwekerij Koolen B.V. has scored 100% for Component 1; it should be considered **RESPONSIBLE** under the SEG standard.
- **Component 4 Eel buying and trading:** Palingkwekerij Koolen B.V. has scored 100% for Component 4; it should be considered **RESPONSIBLE** under the SEG standard.
- **Component 5 Eel farming:** Palingkwekerij Koolen B.V. has scored 100% for Component 5; it should be considered **RESPONSIBLE** under the SEG standard.
- With an overall Responsibility score of 100%, Palingkwekerij Koolen B.V. can be considered as RESPONSIBLE under the SEG standard and suitable for certification.

5. Recommendations:

It is recommended that the following improvements are implemented before the next audit:

- 1. Record all the company's social activities, including awareness and training about SEG and sustainability.
- **2.** Add the SEG logo to Palingkwekerij Koolen B.V. printing and stationery, particularly the paper where the invoices are printed.

Best Practices

- Procure glass eels from only one supplier who proves the reliability of the eel and documents the whole process effectively, and is SEG certified.
- The company presents a high level of sustainability practices, including heat recovery, waste management, water management and sustainable building design.

SEG-Report-V1-2021 | Green Partner Audits & Consultancy B.V. | Nicolaes Maestraat 2 Office 213 | 1506LB Zaandam | The Netherlands KvK 67691951 | www.green-partner.nl

6. Next Audit

After the audit, the client was assessed against the risk assessment set out in the methodology, set out in the table below.

Questions	Performance of the Client at Audit	YES	NO
1	Has the client been part of any external investigation which may be of concern to SEG AND/OR been suspended from any other certification standard?	Enhanced Surveillance	Go to Q2
2	Has the client received a borderline (*) pass for a Component in its previous audit?	Enhanced Surveillance	Go to Q3
3	Does the client only buy and sell product (does not physically handle it?)	Minimum Surveillance	Go to Q4
4	All other scenarios	Standard Surveillance	

	Certification Audit	Year 1	Year 2	Year 3	Year 4 Recertification Audit
Minimum Surveillance	Onsite Audit	Remote Audit	Remote Audit	Remote Audit	Onsite Audit
Standard Surveillance	Onsite Audit	No Audit	Onsite Audit	No Audit	Onsite Audit
Enhanced Surveillance	Onsite Audit	Onsite Audit	Onsite Audit	Onsite Audit	Onsite Audit

As the client has been seen to fall into the Standard Surveillance bracket, the next audit will be due in December 2023 (in 2 years) and shall be an onsite audit.

Accredited SEG Assessor

7. The Assesment

The tables below give the assessment for each of the criteria in the standard and a rationale for the scores given above.

above.	
Component 1 –	Generic requirements
Criterion 1.1: C	ommitment to legality
Responsible	For at least the past two years: the organisation has not been found guilty for any offences relating
indicators	to eel fishing or trading.
Aspiring	For at least the past 12 months: the organisation has not been found guilty for any offences relating
indicators	to eel fishing or trading.
Discussion	The company declared at the time of the assessment that there had not been any legal proceeding
	against the company under assessment in the past 2 years and that there were no ongoing
Score	investigations either. Responsible
	ontribution to Eel Conservation Projects. (Optional bonus score)
	* - * * * * * * * * * * * * * * * * * *
Responsible	The organisation donates at least 2% of its profits or at least 20% of its corporate responsibility
indicators	programme to projects that make a positive contribution to eel conservation or population enhancement, such as Eel Stewardship Funds, River Restoration projects, conservation and
	education projects.
Aspiring	The organisation donates 1 – 1.99% of its profits or 10 - 20% of its corporate responsibility
indicators	programme to projects that make a positive contribution to eel conservation or population
	enhancement, such as Eel Stewardship Funds, River Restoration projects, conservation and
	education projects.
Discussion	The company's profits are paid into DUPAN on a range of 5-7%. This is a yearly contribution. Once a
	month, it is reported to DUPAN how much has been sold. €0.50 per kgs of round eels are then paid to
	DUPAN. In addition to its financial contributions, Mr Swinkels donate his time as part of the board of
	DUPAN, performing as treasurer and as well the chairman of NeVeVi, The Dutch Association of Fish
	Breeders. NeVeVi unites fish farmers in the Netherlands. The association consists of Dutch fish
	farmers of various fish species, including Eel. The association maintains contacts with science, education, government, trade partners and the entire broad field of aquaculture.
	Refer to evidence 1:1:1
Score	Responsible
Criterion 1.3: T	he organisation trades in certified responsibly sourced Eel
Responsible	The organisation trades in at least 50% (by number) of certified responsibly sourced Eel and has the
indicators	documentation to demonstrate that.
Aspiring	The organisation trades in 10 – 49.9% (by number) of certified responsibly sourced Eel and has the
indicators	documentation to demonstrate that.
Discussion	The total amount of glass eels purchased in 2020 was 3.569.816 pieces. Palingkwekerij Koolen B.V.
	has only one suppliers: which is a SEG suppliers. The company present sufficient
	Refer to evidence 1:1
Score	Responsible

Criterion 1.4:	Fraceability
1.4.1: Traceabi	lity - Incoming product, separation and segregation
Responsible indicators	 Certified and uncertified eel products can be clearly and easily traced back to their source. Where a fishery or buyer, an electronic tele-declaration system is used It operates a clear system which ensures that the product remains separated at all stages from arrival to dispatch from non-certified eel products. The organisation ensures that any products wishing to make a claim as certified do not contain any non-certified eel-based ingredients. If resolved through mass- or number- balance calculations, the margin of error does not exceed 2%
Aspiring indicators	 Certified and uncertified eel products can be traced back to their source. If segregation is not possible, there are clear and auditable records of the numbers of certified and uncertified eels entering the organisation at each facility It can demonstrate through auditable records that the number of certified eels exiting the organisation in a ear did not exceed the number that entered If resolved through mass- or number- balance calculations, the margin of error does not exceed 5% or if a farm, the 2800 pieces per 1 kg of glass eels is applied.
Discussion	All new eels owned by Palingkwekerij Koolen B.V. are certified and come from only one SEG suppliers. Therefore, the separation requirement between SEG and non-SEG is not considered starting from 2020. The glass eel from the supplier is already mixed because Gurruchaga delivers a Refer to Evidence 1:1
Score	Responsible
	lity - Outgoing product
Responsible	Where a fishery or buyer, an electronic tele-declaration system is used
indicators	 Documentation is well maintained with a maximum of 2% error in the following: The organisation correctly uses batch-coding for labelling certified product, which can be on the packaging for the product, or included in the documentation (e.g. invoice) with the assignment All product to be sold as certified by an organisation is accompanied by an invoice which meets the following criteria: Includes an appropriate batch code Includes a record of the quantity (no. & weight) of product and to whom it was sold
Aspiring indicators	 Documentation is well maintained. If resolved through mass- or number- balance calculations, the margin of error does not exceed 5% in the following (or if a farm, the 2800 pieces per 1 kg of glass eels is applied): The organisation correctly uses batch-coding for labelling certified product, which can be on the packaging for the product, or included in the documentation (e.g. invoice) with the assignment All products to be sold as certified by an organisation are accompanied by an invoice which meets the following criteria: Includes an appropriate batch code Includes a record of the quantity (no. & weight) of product and to whom it was sold

Discussion	Palingkwekerij Koolen B.V uses correct and accurate batch coding for product labelling and
	invoicing, including the order number, batch identification and traceability numbers required by the
	Dutch authorities and customers. Palingkwekerij Koolen B.V supplier delivers complete
	documentation per batch, including the INTRA code and full traceability from the catch of the glass
	eel, including the names of the fishermen and their vessels. At the same time, Palingkwekerij Koolen
	B.V only has just one SEG supplier at the 'real or true' responsible eel level of demonstrating
	Palingkwekerij Koolen B.V commitment to sustainable practices and the protection of Eel.
	Refer to Evidence 1:3
Score	Responsible
1.4.3: Traceab	ility - Record keeping and documentation
Responsible	The organisation operates a system that allows the tracking and tracing of all Eel from purchase
indicators	to sale and including any steps in between. In the case of live eels this should include the ability
	to track each batch delivered to a buyer to be connected back to a water, a time period
	(maximum duration one month) and specific fisherman/vessel
	If a fisherman or buyer, a tele-declaration system is used to report catches and trade
	The organisation operates a system that also allows for the completion of a batch reconciliation
	of eel product by weight over a given period.
A • . •	The organisation maintains records for a minimum of three (3) years. The observation of three (3) years.
Aspiring indicators	The above requirements are met except that:
indicators	Records have been maintained for less than three (3) years If a fish arms a particular actual and all matters are all and a larger than a residue and the second to
	If a fisherman or trader, a tele-declaration system is planned to be used to report catches and trade in the next season
Discussion	Palingkwekerij Koolen B.V keeps records for seven years to date, following Dutch regulations. The
Discussion	batch numbering of the supplier also accompanies eels received from an SEG source. The growth of
	fish is monitored regularly, and therefore the weight of fish within separate systems is
	monitored closely. Each sale of live eels is given a batch number defined by the company, specifying
	weight and size. A copy of this record is sent to the customer, while the original is kept for the
	company's internal records. Considering the records and onsite evidence, Palingkwekerij Koolen B.V
	has solid record-keeping, documentation, and internal traceability in place.
	Refer to Evidence 1:4
Score	Responsible

Criterion 1.5: Biosecurity & welfare – Eel and eel products are provided with minimal risk of diseases, parasites and alien species

1.5.1: Eel Fishing: Biosecurity measures are adopted Responsible indicators - The fishery conducts good biosecurity measures such as the disinfection and drying of nets and equipment between each fishing in different waters. OR: - The fishermen only operate in the same river or estuary, with no risk of transferring diseases or alien species between catchments Discussion Not Applicable Score Not Applicable

1.5.2: Eel buying & trading: Biosecurity is present and disease is treated rapidly and appropriately

The use of chemicals follows legal requirements of the appropriate EU regulations and of the country concerned. The facility has the appropriate permissions to operate from the relevant licensing authority An effective and documented biosecurity plan is in place and there is evidence that it is being followed. Records are available showing regular monitoring of health and possible signs of stress according to the facility's plan (including the completion of microscope parasite checks) and daily mortality is recorded.

	 Records are maintained according to the Medicines Regulations for use of any medicines and/or chemicals used in the facility. 					
Aspiring	• The use of chemicals follows legal requirements of the appropriate EU regulations and of the					
indicators	country concerned.					
	 The facility has the appropriate permissions to operate from the relevant authority An effective and documented biosecurity plan is in place and there is evidence that it is being 					
	• An effective and documented biosecurity plan is in place and there is evidence that it is being followed.					
	• Eels are regularly monitored for health and possible signs of stress (although this might not be					
	documented) and daily mortality is recorded.					
	• Records are maintained according to the Medicines Regulations for use of any medicines and/or					
	chemicals used in the facility.					
Discussion	The owner and company's staff are regularly trained in hygiene and sanitation, which is a legal					
	requirement. The volume of chemicals used is so small that the effect on the water quality is virtually					
	non-existent. There are suitable biosecurity measures in place. No outside personnel are allowed onto the premises. Palingkwekerij Koolen B.V has all the relevant permits and licences to operate					
	as a company following the provisions of the Dutch authorities for the cultivation, processing and					
	sale of fishery products. The company holds permits issued by the Dutch Food Standards Agency					
	and a veterinarian control under number Palingkwekerij Koolen B.V has eliminated almost all					
	use of medication and has focused on maintaining the health of the eels by guaranteeing an					
	excellent level of water quality. Eels arriving at the facility are placed in separate systems to eels					
	already present as a form of quarantine. The facility usually uses pH as a form of controlling disease					
	outbreaks. In the remote case, that medication is required for the eels; this is defined via veterinary					
Score	approval. Responsible					
	ing: Biosecurity is present, and disease is treated rapidly and appropriately

The company has eliminated all use of medicines and has focused on maintaining the health of the eels by ensuring an 					

	Palingkwekerij Koolen B.V does have a UV system onsite, and the level of water quality used was					
	onsite controlled during this 2021 audit. The nursery water does not contain any artificial additives.					
	All water used in the nursery passes through a recirculation system. This means that all the water					
	used is reused. This ensures extremely low energy consumption. The water in the tank is renewed					
	constantly. The water passes through a filtration system and then returns to the tanks. Waste goes to					
	the farm's own water purification system. The waste is separated from the water, and the water					
	disappears into the sewage system. In addition, there are all kinds of heat exchangers and all the					
	waste heat is recovered.					
Score	Responsible					
	ng: The risk of restocked eels introducing disease into wild populations has been assessed and is					
minimal	The Hist of restocked cells introducing discuse into who populations has been assessed and is					
Responsible	Eels are tested before restocking and found to be free of disease AND/OR eels are from a known					
indicators	source which is tested on at least an annual basis and known to be free of disease.					
Aspiring	Eels are tested before restocking when first sourced from a new area, and periodically (at least					
indicators	annually) thereafter to ensure they are free from disease.					
Discussion	The eels are under control concerning diseases; therefore, this is a part of the daily work process. The					
	eels must pass the internal control before they leave the premises. Miss Swinkels directly control this					
	process, and without her supervision, the eels do not leave the company. The company provides all					
	documentation requested by customers and authorities in the international market appropriately. If					
	the request is coming from clients outside The Netherlands, for example, Germany, a certificate					
	provided by Wageningen University is provided, demonstrating the Eel provided being free of disease.					
	In all cases, it is always the intention of the company to deliver eels that are free of disease in all					
	instances. Considering that the eels come from a known source already controlled by SEG, it is possible					
	to establish their traceability in case of sickness.					
Score	Responsible					
1.5.5: Wholesa	le / Retail / Processing: Hygiene Plans are followed and there are rare examples of infection					
Responsible	Food processing hygiene plans are followed					
indicators						
Discussion	Palingkwekerij Koolen B.V do not process food. The company has all permissions to operate, and					
	visually is easy to define Palingkwekerij Koolen B.V. facilities as adequately managed.					
Score	Not Applicable					
						

Component 4 - Eel buying and trading					
Criterion 4.0: Segregation of certified and uncetified eels					
Weighting: 2					
Responsible	Certified and non-certified are kept separated, from point of collection through holding to sale and				
indicators	onward transport				
No Aspiring					
indicators					
Discussion	The process of separation of SEG and non-SEG eels is not applicable for Palingkwekerij Koolen B.V considering season 2019-2020, as they only work with one SEG supplier and have a level of glass eel responsible. However, the company's internal procedure separates eels per batch delivered per supplier. Refer to Evidence 4:1				
Score	Responsible				
Criterion 4.1: 7	The Glass Eel holding facility is a registered Aquaculture Production Business				
Weighting: 1					
Responsible	The Glass Eel holding facility is a registered Aquaculture Production Business				
indicators					
Aspiring	The facility is not a registered Aquaculture Production Business, but has credible plans to register				
indicators	within the next 6 months				

Discussion	Palingkwekerij Koolen B.V is a company registered under the chamber of commerce of The					
	Netherlands number which establishes its registration as a fish processor under SB					
	number code 1020 following the policy and regulations set by national and EU Common Fisherie					
	Policy (CFP) and rules for aquaculture.					
Score	Responsible

Score	Responsible			

Component 5 -	Eel farming
	The total mortality rate during the culture process is low
Weighting: 2	,
Responsible indicators	The Percentage Mortality Rate of eels in culture is less than or equal to 10% on average in the current and previous year OR as an average of the previous five years An accurate daily log is maintained of the number and causes of mortality
Aspiring indicators	The Percentage Mortality Rate of eels in culture is between 10 and 15% on average in the current and previous years OR as an average of the previous five years. An accurate daily log is maintained of the number of mortalities
Discussion	De Palingfabriek recorded mortality per tank manually and recorded daily per dead Eel. Considering that the life cycle process of the Eel in aquaculture before consumption is two years, it can be defined for this audit that the mortality rate reaches less than 3.3%. Dutch law dictates that dead eels are required to be disposed of and that this is payable by weight. Detailed records are maintained in kilograms of all dead eels collected from the tanks. Refer to evidence 4:2
Score	Responsible
Criterion 5.2:	The fish meal/oil ingredients in the feed come from a responsible source
Weighting: 1	
Responsible	Fish meal/oil in the feed (including juvenile feeds) is certified by IFFO or MSC or shown in some
indicators	other way to be from responsible or sustainable sources
Aspiring	Fish meal/oil in the feed (including juvenile feeds) is not certified by IFFO or MSC or shown to be
indicators Discussion	from responsible sources, but there are credible plans to move to such a supplier within 2 years
	Refer to Evidence 5:4
Score	Responsible
Criterion 5.3:	eed is used as efficiently as possible
Weighting: 1	
Responsible	The average feed conversion ratios in the farm are as follows:
indicators	 Glass eel to fingerlings: 1.1 or less Fingerlings to 200g: 1.6 or less Large eels: 2.0 or less
Aspiring	The average feed conversion ratios in the farm are as follows:
indicators	 Glass eel to fingerlings: 1.3 or less Fingerlings to 200g: 1.8 or less Large eels: 2.2 or less
Discussion	The feeding of the eels at Palingkwekerij Koolen B.V is crucial for the eels' health and the company's commercial success. Feeding is done through timed automated dispensers through a computerised silo-controlled system and handled directly by Miss Swinkels, who closely supervises this process to ensure no feed wastage. The feeding process is carried out in different ways depending

(GRP).

on the growth cycle of the glass eel. The first part of the cycle starts with glass eel tanks which are supplied with an automated system activated three times a day. The medium and large tanks use pendulum feeders, which are activated depending on the eel activity in the tanks. FCR figures were calculated for each size range identified in the standard as 1.0 - 1.1 for Glass eels to fingerlings and 1.3 - 1.5 for eels up to 200g and larger eels. Larger eels, which can exceed 1200 grams, have a higher FCR as stipulated in the reports, as they typically have a higher FCR, of course, than eels grown to 800g or more. Refer to Evidence 5:1 **Score** Responsible Criterion 5.4: Water quality Weighting: 1 Responsible A system is in place that is expected to keep key water quality parameters within suitable indicators tolerances for healthy eel survival (e.g. Ammonia, Suspended Solids, pH, oxygen) Water quality management procedures are in place including regular monitoring of relevant parameters which shows that water quality is always high and stable Water quality monitoring is linked to an alarm-based system in the event of a sudden drop in water quality The facility operates a back-up system to ensure that water quality will not adversely affect survival rates in the case of a power supply failure. **Aspiring** A system is in place that is expected to keep key water quality parameters within suitable indicators tolerances (e.g. Ammonia, Suspended Solids, pH, Oxygen) Water quality management procedures are in place and there is regular monitoring of relevant parameters which shows that water quality is always high and stable. Discussion Water quality plays an essential role at Palingkwekerij Koolen B.V, as water control has made it possible to eliminate diseases and to avoid supplying the eels with medicines. The water is constantly monitored, and ammonia, solids, pH, and oxygen levels are checked regularly. Palingkwekerij Koolen B.V has the appropriate permits related to groundwater rights. The company employ effective systems of filtration, resulting in clean breeding water. All water used in the nursery passes through a recirculation system. This means that all the water used is reused. This ensures extremely low energy consumption. Oxygen reserves are kept at the facility in case any of the systems require immediate saturation, should one of the oxygenation systems fail or require maintenance. Water quality monitoring is linked to alarm systems in case of any sudden incidents concerning water quality. In addition, the entire water circuit is connected to an emergency generator to ensure the eels' survival and maintain a constant water cycle in the event of a power failure. Refer to Evidence 5:2 Responsible **Score** Criterion 5.5: There are minimal ecological impacts from effluent discharge Weighting: 1 Responsible The system is closed-circuit and has no discharge OR indicators Effluent discharge is regularly tested by the farm AND Effluent discharge complies with all local and national requirements AND Has not been found to be non-compliant in the past 5 years. **Aspiring** Effluent discharge is regularly tested by the farm AND/OR indicators Has been found to be non-compliant on no more than 1 occasion in the past 5 years. Discussion The management handles the discharge and water management, where the waste generated by the aquaculture process is effectively managed, and the energy recovery has been added to this. The waste is removed periodically and given to local farmers to fertilise their land. No records have been found to indicate any infringements regarding the quality of the water discharged from the installation. Palingkwekerij Koolen B.V. follows the municipality's plans as stipulated in the Municipal Sewage Plan

	Refer to Evidence 5:3					
Score	Responsible					
Criterion 5.6: G	rading, slaughter and transportation are carried out with respect to welfare					
Weighting: 1						
Responsible	Grading is completed in an efficient manner					
indicators	Slaughter is completed by a method that provides an instant death or renders them					
	insensible to pain, i.e. electric stunning or percussive stunning.					
	 Procedures are in place to ensure transportation provides suitable conditions for fish 					
	welfare.					
Aspiring	Other, previously acceptable methods of stunning before slaughter are used, e.g.					
indicators	chilling, but there are credible plans in place to invest in the latest methods within the next					
	2 years					
Discussion	Palingkwekerij Koolen B.V has a 4-size grading machine. This machine fulfils the function of sorting					
	the eels in an efficient way where the air pump moves the eels. The company does not have a					
	slaughtering process in the facilities. Live eels leave the Palingkwekerij Koolen B.V facility via logistical					
	transports, which are entirely provided by Palingkwekerij Koolen B.V customers. Cooling before					
	transport is carried out in separate tanks following grading where eels are lowered in temperature					
	gradually from 24°C to around 14°C over one week to habituate and purge eels before final weighing,					
	loading and transportation and processes do not allow to lets the eels go without water or dry out.					
Score	Refer to evidence 4:4 Responsible					
	ne farm provides Eel for restocking					
Weighting: 2	ie farm provides Eer for restocking					
Responsible	The farm can provide documented evidence that 10% or more of the farm's annual eel production					
indicators	(by piece) has been provided for restocking for the purpose of conservation / escapement.					
Aspiring	The farm can provide documented evidence that it makes 10 % of their annual eel production (by					
indicators	piece) available for restocking for the primary purpose of conservation / escapement AND/OR for					
	new clients, the farm can demonstrate that they have bookings for re-stocking in the following year					
	at more than 10% of the predicted annual eel production (by piece) for the purpose of conservation					
	/ escapement.					
Discussion	In 2020, the total purchase of glass eel was 1.106.000 pieces for restocking, but					
	Koolen B.V. added 438.101 pieces from consumption to restocking. This equates to for the year					
	based on the exact number of pieces brought to Palingkwekerij Koolen B.V. There is sufficient onsite					
	information regarding the quantities and traceability of these purchases made from SEG certified					
	suppliers.					
Score	Responsible					
Criterion 5.8: E	els for restocking are not graded out slow-growers					
Weighting: 2						
Responsible	The size range and quantities in the eels for restocking reflect 100% that for the age group in the					
indicators	whole farm					
Aspiring	The size range and quantities indicate no more than a 25% supplement of those for restocking are					
indicators	from slower growing fish of the same age group					
Discussion	Eels purchased for restocking do not undergo sorting processes. They, therefore, reflect and represent					
	the actual state of glass eels from where they were caught and are kept separate from eels intended					
	for processing and human consumption. Consequently, the size range received and the quantities of					
	eels for restocking reflect 100% that of the age group received, unaltered and unmanipulated.
